DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Goldberg U.S. Patent No. 6,389,038 in view of Dalton U.S. Patent No. 6,236,653. Goldberg discloses a method and system in which voice signals are packetized, combined and sent across a network. A multiplexer combines the voice packets into longer frames (frame bundling) in order to reduce the percentage of a packet that is dedicated to header information (col. 2 lines 11-13, col. 8 lines 15-16). Goldberg does not explicitly disclose whether the received voice signals are compressed or uncompressed. Dalton teaches compression schemes that effectively decrease data rates needed to support audio transmission (col. 1 lines 39-45). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have added standard compression to the communication system disclosed by Goldberg if the signals received were uncompressed. One of ordinary skill in the art would have been motivated to do this in order to conserve bandwidth.
